I'm a professional and team-oriented Fullstack Developer based in Poland. I'm well experienced in the newest Java 8+ and ecosystem, SQL, Linux, JavaScript and React. I use AI on a daily basis and know AI-Agentic best practices to extend my capabilities. I graduated in 2016 in Cracow and since then I constantly improve my tech and soft skills.

Work Experience

During 7 year-long career I had chance to work on Spring Boot micro services projects with some interludes on Front end. I drove product value in implementing features and close collaboration to business. In between the projects I traveled and invested time in well being. My domain knowledge includes Wealth Management, Banking, Air Booking Systems and Credit Products.

Senior Software Engineer
09/2026 – now

Sabre | Cracow, Polska

Maintenance and security hardening of Sabre Red Workspace products

- Maintenance application used by 40k+ clients every week
- Proposing Agentic Workflows and skills improving team work
- Hardening security based on CVEs and CWEs raised by Veracode
- Implemented small feature for internal company tool
- Fixing bugs in very large codebase
- Documenting paths to get things done
- Summarizing legacy documentation

Tech: Java 25/17 · Spring Boot 3 · Agile · RxJs · React · Hibernate · Terraform · Git · GCP · HTTPS · TDD · Jenkins · MongoDB · Copilot

Java Developer
08/2024 – 04/2025

Scalo for CRIF | Cracow, Polska

Modernization and documentation of complex credit delinquency managing applications.

- Application managing flow of agents collecting delinquency
- Most notable clients Group Hera and Deutsche Bank
- Collection of database, 30 microservices and jobs
- Rewrote and modernized complex queries for Microsoft SQL Server
- Significant modernisation of application's code and technology stack
- Fixed bugs related to application's state machine and concurrency in Java 21
- Supported team in documenting legacy algorithms
- Owned migration to Liquibase

Tech: Java 21 · Spring Boot 3 · Kubernetes · SQL · Linux · Agile · Javascript · Angular · Docker · Hibernate · Helm · Canary Deployments · Git · OpenShift · HTTPS · TDD · Jenkins · MongoDB

Cloud Engineer
08/2022 – 09/2023

Intel | Gdansk, Poland

Maintained Intel SGX Firmware Key management application. Wrote tests, fixed bugs in JavaScript, Java and C++.

- Intel's Public Key Infrastructure for SGX and TDX technologies
- Concept of enclaves - encrypted memory regions even OS can't see
- Completed involved internal technical traning
- High impact infrastructure, over 20 microservices

- Received mentoring during Patent Harvesting event, sold one patent proposition
- Worked on build pipelines in TeamCity
- Represented company on OWASP Israel event placing 16th/100 attendees
- Helped rewrite Cassandra management tool from Python to Java
- Participated in day-to-day maintenance tasks and in code reviews

Tech: Java 8 · Linux · SQL · HTTP · REST · Agile · Node · Azure · Python · JavaScript · C++ · CMake · Domain Driven Design · Gradle · Git · TDD · Kubernetes

Software Developer
01/2022 – 05/2022

James Villas Holidays | Remote, Poland

Worked on Event Driven microservices application in Java 8 and Kafka.

- Application managing James Villa's properties
- Architectural decision - Event Driven Architecture with Kafka
- Mentored Junior Developers in everyday tasks
- Extended and generalized core algorithm mapping apartment tree structures
- Implemented new endpoints in Kafka, Java, Avro schemas

Tech: Kafka · Https · Spring Boot · SQL · Linux · Java 8 · Avro · Serialization · RabbitMQ · MQTT · Git · Google Cloud Platform · Tests · MongoDB

Software Developer
01/2021 – 11/2021

Sabre | Cracow, Poland

I participated in rewrite of Assembly based flight booking system to microservice architecture in Java

- Major rewrite of travel booking mainframe written in Assembly
- Received guidance on Google Cloud Platform
- Microservices on GCP and Kubernetes
- Part of larger system with moderate impact
- Collaborated on writing new pieces of functionality based on disassembled pseudocode
- Prepared application for deployment to Google Cloud
- Fixed bugs and maintained existing functionality

Tech: Java 8 · Spring Boot · SQL · Agile · REST · HTTP · Assembly · C++ · Google Cloud Platform · Terraform · Python · Kubernetes · Linux · Docker · SOAP · Git · Mockito · JUnit · WireMock · JUnit

Software Developer
06/2018 – 07/2020

HSBC | Cracow, Poland

Maintained internal integration platform in Spring Cloud and Java.

- Know Your Customer microservices and processes
- New to the bank - registration and logging in users
- High impact
- Integration with upstream systems
- Wrote SMS texting integration for new to bank clients
- Extended XML mapping functionality according to BA documents on JIRA
- Participated in code reviews
- Participated in maintenance and frequent deployments

Tech: Spring Boot · Java 8 · Spring Cloud · Google Cloud Platform · Agile · REST · Linux · Docker · Git · Transactions · JTA · TDD · JUnit · Mockito · Cucumber · WireMock

Software Developer
04/2016 – 05/2017

UBS | Cracow, Poland

I maintained, fixed bugs and extended internal application for bank's traders

- Internal application for Back Office
- Low impact and relatively forgiving project setup
- Application supporting traders in Stocks, Bonds, Commodities and FX

- Reuters and Bloomberg API's integration
- Received and read books on bank's back office operations
- Worked with Spring, Hazelcast, Cucumber, and Java
- Filled in for departing frontend developers for 5 months
- Successfully led recruitment for React positions, resulting in hiring new candidates

Tech: Spring Boot · Java 8 · Hibernate · SQL · Spock · Mockito · REST · Linux · Hazelcast · JavaScript · React · Caching · Transactions

Education

Master of Science, Computer Science 09/2016
AGH University of Science and Technology | Cracow, Poland

Extracurricular Activities

- Credly Profile: credly.com/users/dominik-gawlik
- OWASP Israel 2024 attendance
- Certificate Goethe Institute B1 German

AI Exposure

I have over a year of experience with developing code with AI (non-commercially). I have implemented simple agents and personal projects with Antigravity and now Antigravity CLI.

Own GPT2 local implementation in PyTorch

I have bought, read and highly recommend book “Build a Large Language Model From Scratch” by Sebastian Raschka. I have written from head and run successfully GPT2 model on laptop and trained it on a book. The model learned successfully continuation of sentences quoted from book.

Agents Intensive Capstone Project
link

I have familiarized myself with most common agentic patterns like Plan-and-Execute and self correcting agent loops. I have implemented capstone project involving RAG, persistence, agent to agent delegation and tool usage. Under the link there is a short walkthrough of agent i created.

Tech: Python, Google GenAI

Buddy Gemma
https://buddygemma.help/
HuggingFace profile
ApiKey: vipassana2

I have collected from psychology books training set for SFT finetuning. I have run finetuning through Unsloth notebook on new Gemma 4 26B model. Model has impressive performance as psychoanalyst and asks follow up questions regarding mental health. It runs on Modal infrastructure with frontend written in React.

Tech: React, Unsloth, Modal, Python

Winterhude
https://www.winterhude.app/
Password: Summerhude12@

Online translator, with OCR capabilities. Main idea behind is user pasting text and getting translated sentence pairs (streaming). Every sentence can be listened to through native speaker playback.

Tech: Python, SQLAlchemy, Postgres, React, Google Voice API
